github.com/bishalshrestha013 | bishalshrestha07.com.np | linkedin.com/in/mrshrestha/

Skills

Languages: Typescript, Javascript, Python, SQL

Frontend technologies: React.js, TanStack Start, NextJs, Redux, RTK query, HTML, CSS, Tailwind CSS

Backend technologies: Node.js, Fastify.js, Express.js, FastAPI, Django, Graphql, Redis, Postresql, BullMQ

AI & LLM Technologies: LangChain, LangGraph, Large Language Models (LLMs), OpenRouter, Retrieval-Augmented Generation (RAG), Vector Databases (Qdrant, pgvector), LLM Inference, RunPod Serverless

DevOps & Cloud: Docker, Docker Swarm, GitLab CI/CD, GitHub Actions, GHCR, Portainer, Nginx, Traefik, AWS (EC2, S3), Cloudflare, Linux

Testing & Monitoring: Jest, Vitest, Sentry

Miscellaneous: Monolithic & Microservices Architectures, Meta Graph API, Make.com, OAuth 2.0, REST APIs, WebSockets

Work Experience

MNS AI LABS May 2026 - Present

Senior Full-Stack & DevOps Engineer

- Developed and maintained full-stack SaaS applications using TypeScript, Node.js, React, PostgreSQL, Redis, and Drizzle ORM, including multi-tenant architectures, authentication, RBAC, subscription management, and payment integrations.
- Developed AI-powered applications and asynchronous processing pipelines, deploying LLMs on RunPod serverless GPUs for on-demand inference, using Redis and BullMQ for background job orchestration, and Cloudflare R2 for media storage and delivery.
- Developed social media automation solutions using Meta Graph APIs, supporting multi-account management, automated publishing, and content ingestion through RSS feeds and external APIs.
- Implemented AI-powered semantic search and retrieval systems using Python, Retrieval-Augmented Generation (RAG), and Qdrant vector databases.
- Designed and maintained CI/CD pipelines using GitHub Actions, automating Docker builds, container registry publishing, versioning, and deployment workflows across development and production environments.
- Managed containerized production infrastructure using Docker, Docker Compose, Portainer, Nginx, and Linux VPS, including SSL/TLS configuration, secrets management, reverse proxies, and database backups.

TECH NIRVANA Mar 2026 - May 2026

Software Engineer

- Developed and maintained e-commerce applications and admin dashboards, implementing responsive UI components and backend functionality.
- Designed and optimized database schemas and relationships, ensuring data integrity, efficient queries, and maintainable backend architecture.
- Provided technical guidance to team members on database design, backend development, and production-level best practices.
- Utilized deployment and automation tools to streamline application deployment processes and improve deployment consistency.

DZANGO TECHNOLOGIES Sept 2023 - Jan 2026

Software Engineer

- Led the development of MVPs for different clients, delivering complete solutions from planning to deployment in fast-paced environments.
- Built and maintained scalable web applications using Fastify (Node.js) and React.js, improving performance and reliability across multiple projects.
- Designed and implemented RESTful APIs, database schemas, and core backend logic using PostgreSQL and Node.js.
- Developed and maintained open-source internal packages for React and Fastify, published to the public npm registry, enabling reusable components and services across current and future projects.
- Collaborated with cross-functional teams to build SaaS products and multi-tenant applications with role-based access and modular architecture.

- Automated and streamlined agreement-processing workflows using no-code/low-code tools, reducing manual effort for the operations team.
- Node, Postgresql, Fastify, ReactJS, Graphql, Redis, Docker, Gitlab CI/CD, Github Actions, Nginx, Traefik, Sentry, AWS, EC2, S3

Education

Paschimanchal Campus, IOE, TU 2018 - 2023

B.E. in Computer Engineering

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks

Project Work

- **Baby Cry Classification System:** Developed a web based machine learning system that classifies the reason behind cry of baby using Support Vector Machine(SVM) and Random Forest algorithm. Used Scikitlearn, Dzango (Backend) , React.js (Frontend), Jupyter Notebook.
- **MeroDokan: E-commerce Website:** Developed a web based platform to buy and sell products online. Used Dzango (Backend) , React.js (Frontend), Postgresql

Certificates

- **Machine Learning** — Stanford University
- **Neural Networks and Deep Learning** — DeepLearning.AI
